MECHMAN ALTERNATORS

SPECIAL ORDER OPTIONS

- 1) Most alternators can be special ordered with a self exciting internal voltage regulator. This means that there is no plug on the alternator whatsoever. The alternator will turn itself on and off with engine rotation, and regulate it's own charging voltage. This is especially useful on custom applications where the original alternator harness damaged, missing, or incorrect.
- 2) Any alternator can be special ordered in a high temp satin black finish for \$25 additional. (MAP price) Add the letter "B" to the end of the part number to denote black finish.
- 3) Most alternators can be special ordered in a polished aluminum finish for \$50 additional. (MAP price) Add the letter "P" to the end of the part number to denote polished aluminum finish.
- 4) Most alternators can be special ordered in a chrome plated polished aluminum finish for \$75 additional. (MAP price) Add the letter "C" to the end of the part number to denote chrome plated finish. For certain part numbers, this may increase build time by as much as 4 weeks. Call for ETA.
- 5) Most alternators can be ordered to be set up for external voltage regulation. This means that there is no voltage regulator in the alternator, only a wiring harness with positive and negative brush connections. This makes the alternator compatible with the 91102R adjustable external voltage regulator. (sold seperately) An alternator that is special ordered this way will not function without an external voltage regulator. Please note that the vehicle's OEM alternator harness will be left disconnected in this type of installation, and may cause check battery lights or other failsafes to be activated on some cars.

MECHMAN ALTERNATORS

INSTALLATION NOTES:

- 1) This unit has a self exciting internal voltage regulator that does not require anything to be plugged into the alternator.
- 2) The installation of this unit will cause the "check battery" light to stay on in the dash.
- 3) This unit will more than likely not charge below 800 engine RPM on this vehicle.
- 4) This vehicle has a narrow drive belt, and may experience belt slip with alternators of this amperage.
- 5) This unit comes equipped with a smaller 1.75 inch diameter alternator pulley, and will require a slightly shorter drive belt for proper belt tension.
- 6) This unit may require a rectangle to oval adapter harness if the vehicle is equipped with the HD charging option from the factory. (not common)
- 7) Some 97-04 vehicles may have a charging system DTC code after installing this alternator.
- 8) This unit includes the necessary alternator adapter bracket kit.

Be sure to measure your crankshaft pulley and calculate pulley ratio to determine safe max engine RPM with the smaller alternator pulley. Safe max. operating RPM for the alternator is 20,000 RPM.

Most of our alternators are built to order due to the specific nature of each application. Please allow for appropriate shipping time when ordering your Mechman Alternator.

SERIES

Elite Series- These 6 phase large case alternators offer maximum output at low RPM. 250 amp units are great for high RPM racing applications, 370 amp units work great for extremely high amperage applications operating below 5,500 RPM engine speed. Either model is suitable for daily use.

G-Series- Our GM alternators, based on proven technology, equipped with our solid copper rectifier with press-fit diodes, premium NTN bearings, high output stators.

S-Series- 6-Phase, 12-diode, 2-tier rectifier, these highly efficient alternators are bolt-in replacements for a broad range of Domestic and Import applications.

INTALLATION NOTES:

- 1) Always visually verify the plug type on your vehicle before ordering. Some vehicles in this year range will not be compatible.
- 2) This unit has the voltage adjustment dial located under the hood next to the alternator
- 3) This unit has an in-vehicle mounted adjustment dial and voltage monitor
